

Day 11–KALI-SETUP

Name: Perehan Sewid

THEORY

1. What is Kali Linux?

A Linux distribution designed for cybersecurity and penetration testing.

2. Why is Kali Linux used in cybersecurity?

Because it provides many security testing tools.

3. What is a virtual machine?

A virtual computer running inside a physical computer.

4. What is a hypervisor?

Software that creates and manages virtual machines like virtual box and vmware.

5. What is VirtualBox?

A free hypervisor for running virtual machines.

6. Explain Host OS and Guest OS.

Host OS runs on the physical computer; Guest OS runs inside the VM.

7. Why is using Kali inside a VM useful for beginners?

It provides a safe, isolated environment for learning.

8. What is a VM snapshot?

A saved state of a virtual machine.

9. Why should students create snapshots?

To quickly restore the VM if something goes wrong.

10. What does whoami display?

The current username.

11. What does hostname display?

The computer's hostname.

12. What does uname -a display?

Detailed system and kernel information.

13. What does /etc/os-release contain?

Information about the Linux distribution.

14. What does ip addr show?

Network interfaces and IP addresses.

15. What does ip route show?

The system's routing table.

16. What is sudo?

A command that runs programs with elevated privileges.

17. Why should elevated privileges be used carefully?

Mistakes can affect the whole system.

18. What does sudo apt update do?

Updates the package lists.

19. Why should Kali Linux tools only be used on authorized systems?

Unauthorized testing can be illegal and harmful.

20. Explain the difference between ethical security testing and unauthorized access.

Ethical testing has permission while unauthorized access does not.

PRACTICAL SCREENSHOTS

Kali desktop · whoami · hostname · uname -a · cat /etc/os-release · ip addr · jayvik-cyber-lab
directory · VirtualBox snapshot (Day11-Clean-Kali)

```
kali@kali: ~/jayvik_cyber_lab
